CHALLENGE @ CLIK

TheCutter

07.03 – 14.06.2019

CALL x IDEAS

Do you have an idea of how important is product packaging management for a company?

In the world, there are thousands of machineries and processes for packaging of goods and Tosa Group knows it well. Tosa, a constant growing Piedmontese company located in Santo Stefano Belbo (CN), is investing in innovation! The engaging challenge is to design new machineries and processes still unknown today.

Are you a master student of the Politecnico di Torino? Do you study Design, Mechanics, Management or any other scientific subjects? Are you at the end of your study course? Would you like to study the economic feasibility of these new processes? This is an opportunity to meet different students, discover new points of view and share yours.

During the opening days, we will present you the challenge and starting from this scenario, together with your team, you will further investigate the problem in order to get more details and propose a new idea to help Tosa Group.

So... what are you waiting for? If what you read seems like a good way to learn new things and get involved, this Challenge is right for you.

This activity will entitle you to obtain 6 credits. Check your institutional email, look for "Challenge @ Clik – TosaGroup" and read the rules carefully.

ENROLL NOW! PLACES ARE LIMITED!
