Taking a Look at the Future: a cocktail hour event!

Dott. Andrea Campanella (Open Networking Foundation)

Taking Open Source software to production in Telecommunication networks

In this talk we will outline in the past years open source software has been transforming Telecommunication networks and the industry at large. With commercial deployment of open source based solutions. An introduction to ONF, it’s mission and goals will be provided, paired with an overview of several projects with their respective deployments, starting from network controller ONOS (Open Networking operating system) to VOLTHA, the virtual olt hardware abstraction. Also current efforts around 5G and mobile networks will be presented. Challenges to go to production with open source and how to overcome them, will be analysed. Finally the importance of the open source community and ONF members and partners will be discussed.
